

Crystal Quick Reference

Aragonite - Green

Green Aragonite

Chemical formula CaCO_3

Aragonite is in the calcium carbonate family but has a different atomic lattice. The atoms arrange in an orthorhombic crystal system with acicular crystal. Repeated twinning results in pseudo-hexagonal forms. It may appear in columnar or fibrous forms.

Green aragonite provides a safe and common base when you are trying to pull together opposing elements.

It helps to awaken compassion and empathy. It can help sooth nervous energy!

This is a powerful crystal for healing old emotional wounds.
