

Crystal Quick Reference

Chalcopyrite

Chalcopyrite is a copper iron sulfide mineral with the chemical formula CuFeS_2 .

This crystal will have all the properties of copper, iron, and sulfur. It is found in Peru, Mexico, and Australia. It was first recorded by J. F. Henckel in 1725. It was named after the Greek words for copper and brass.

It removes energy blockages. This crystal also works with the chakras cleansing out negative energies, activating the chakras, and aligning them.

Chalcopyrite increases creativity. It also helps to resolve rigidity helping people to become more flexible. It also helps with being more innovative.

It also helps deal with fears of failure especially those related to poor self esteem.

The copper and sulfur components help to protect the user from the effects of long term/lengthy medical treatments such as chemotherapy, radiation therapy. It also helps to recover from repeated surgical procedures. These two elements also can help with removing toxins, helping with inflammation, bacterial and viral related fever, and possibly brain disorders.

If the crystal is used during meditation it may help in gaining a deeper understand of your connection to the universe and may help you receive guidance from higher beings.
